SUMMARY

I turn slow, manual business work into AI-powered systems that run on their own, with a person approving what matters. Building software with AI since 2024 (Cursor, in college). Professionally since 2025. Available for full-time work; can start within 1–2 weeks.

SELECTED RESULTS

- **6 accounts live about 5 weeks** after the first commit on an agency email/SMS platform I built
- **3,200+ automated tests** on that platform; **700+** on my own job-hunt platform
- **About $1 per finished AI video**, vs about $12 for paid generative video
- **~89% lower monthly platform cost**, projected in my business case for the agency

EXPERIENCE

AI & Systems Lead | Feb 2026 – Present
Arrow Group Consulting | Michigan, USA (remote) | Part-time contract

US outsourced-CMO agency. I built its in-house platform and lead client onboarding, handling 8 clients at once.

In-house email/SMS platform

- Built and launched it with Claude Code, with Claude drafting and OpenAI images; now replacing GoHighLevel
- Wrote the business case and planned the move of 10,000+ client contacts, old platform running in parallel
- Made it safe by default: test mode, opt-outs re-checked before each send, 4 user roles, tests that never send

Stack: TypeScript, Cloudflare Workers, Hono, D1, Queues, Resend, Twilio, React, Vite, Claude API, OpenAI API

AI in the team's daily content app (AGC HUB: React, Firebase, Vercel, Claude API)

- Added Claude Haiku 4.5 features: subject lines, revision ideas, a help chat and task-image analysis
- Brought the content team's work from 5 tools (Drive, ClickUp, Trello, GoHighLevel, Canva) into one app

Client systems and onboarding

- Built a nonprofit funnel tracker, a resale startup's admin dashboard and Square payments on a client site
- Moved client sites to Cloudflare and one from WordPress to Wix; run client onboarding end to end
- Explain each build in plain language on calls; warmed a radio station's domain to 6,500 emails/day

Stack: Cloudflare Workers, D1, Pages, Square API, GoHighLevel, DNS, SPF/DKIM/DMARC, A2P 10DLC

Virtual Marketing Assistant (VMA), agency placement | Sep 2025 – Feb 2026
Doneverse | Philippines | ~6 months | agency matching trained marketing talent with US founders

Technical implementer for Arrow Group Consulting's founder (led to a direct hire), then speaker Jonathan Fanning.

- Built Wix and Wix Studio sites; set up and ran Mailchimp, GoHighLevel, HubSpot and Kajabi; also used Jotform
- Learned HubSpot on the job, then recommended HubSpot and ActiveCampaign; the agency adopted both

AI PROJECTS

Personal projects, built with AI-assisted development (Claude Code). Walkthroughs on request.

Pipeline: outreach platform with a hands-off AI job hunt
My own CRM and email platform (pipeline board, campaigns that stop on a reply, approval queue) with a job hunt built to run unattended, on a daily AI budget (about $1–2.50 a day, estimated).

- Shortlists up to 30 new AI roles a day from 5 job-board APIs; Claude Opus 5.5 vets each one and writes the best 10
- A second AI pass strips any claim not in my CV; job posts are untrusted and checked for scams and low pay
- Only strong, clean fits send by themselves (via Gmail) after a 3-hour hold; the rest wait for my approval

Stack: JavaScript, Hono, Cloudflare Workers, D1, Cron Triggers, Email Routing, Claude API, Apps Script, Gmail API

yt-engine: AI short-video pipeline
Turns a one-line topic into a finished vertical video with captions for TikTok, Shorts and Reels. I approve and post every video by hand.

- Cut cost to about $1 a video (a real 2-part series cost $0.72) by animating AI stills instead of paying for AI video
- Claude writes the script, OpenAI makes the images and voice, and my own FFmpeg engine renders the video
- Shows the cost before any paid call; Claude can run it from chat, paid steps wait for my yes; 406 unit tests

Stack: Python, FastAPI, Claude API, OpenAI API (images, text-to-speech), FFmpeg, Cloudflare Tunnel

SKILLS

- **AI and LLMs:** Claude API (Haiku 4.5, Opus 5.5), OpenAI API (gpt-image-1, gpt-4o-mini-tts), fal.ai, ElevenLabs, prompt design, structured JSON output, adversarial second-pass checks, prompt-injection checks, human-in-the-loop approval, cost estimates, spend tracking, daily AI budgets
- **Automation and integrations:** REST APIs, webhooks, JSON, cron jobs, queues, idempotent retries, HMAC-signed links, Google Apps Script, Gmail API, Google Sheets API, GoHighLevel API, Resend, Twilio, Stripe, Square API; familiar with n8n (one 47-node workflow design, personal)
- **Web and backend:** Python (FastAPI), JavaScript, TypeScript, Hono, React, Vite, Tailwind CSS, Cloudflare Workers, D1, Queues, Cron Triggers, R2, Pages, Email Routing, Tunnel, Firebase, Vercel, FFmpeg, database CHECK constraints, role-based access control (default-deny), fail-closed APIs
- **CRM, email and web:** GoHighLevel, HubSpot, Kajabi, Mailchimp, ActiveCampaign, Jotform, Wix / Wix Studio, SPF/DKIM/DMARC, A2P 10DLC, sending-domain warm-up, suppression lists, recipient allowlists
- **Tools:** Claude Code (daily, custom skills and CLI tools), Cursor (since 2024), Git, GitHub Actions, Vitest, workerd

EDUCATION

BS Computer Science, Gordon College | 2021–2025 | Thesis published at IRCITE 2025 (Bulacan State University)

Senior High School, TVL–ICT Track, Columban College Inc., Olongapo City | 2019–2021 | With High Honors

LANGUAGES AND SETUP

English (professional working proficiency), Filipino (native). Laptop, two separate internet providers (one as backup), UPS for the internet router.
