SUMMARY

AI automation engineer who builds Claude- and OpenAI-powered tools, workflows and integrations for marketing teams, with about a year of remote work for US clients. Built and launched a marketing agency's in-house email/SMS platform on Cloudflare Workers (6 client accounts live about 5 weeks after the first commit, 3,200+ automated tests) and added Claude features to its daily content-operations app. Background in CRM, email/SMS deliverability and marketing ops; builds with Claude Code (AI-assisted development). Available full-time on US business hours (EST–PST overlap), starting immediately; async-first.

SKILLS

- **AI & LLM:** Claude API (Sonnet, Haiku), OpenAI API (images, text-to-speech), prompt engineering, LLM extraction and drafting, human-in-the-loop review, AI chatbot (in-app help chat), AI-assisted development (Claude Code)
- **Automation & Integrations:** workflow automation, n8n, API integrations, JSON, webhooks, web scraping, data enrichment, Google Apps Script, Google Sheets API, GoHighLevel API, Twilio, Stripe, Square
- **Engineering & Cloud:** TypeScript, JavaScript, Python (FastAPI), React, Vite, Hono, Tailwind CSS; Cloudflare Workers, D1, Queues, Cron Triggers, R2, Pages; Firebase; Vercel; GitHub Actions; FFmpeg; Vitest; role-based access control
- **Marketing Systems:** GoHighLevel, HubSpot, Mailchimp, Kajabi, ActiveCampaign, SPF/DKIM/DMARC, A2P 10DLC
- **Tools:** ClickUp, Notion, Google Workspace, Git/GitHub
- **Languages:** English (professional working proficiency), Filipino (native)

EXPERIENCE

Implementation Specialist — CRM, Web & Marketing Systems

Arrow Group Consulting · Michigan, USA (remote) · Part-time contract · Feb 2026 – Present

Technical lead for client onboarding and builder of in-house platforms at an outsourced-CMO agency.

In-house email/SMS marketing platform — TypeScript, Cloudflare Workers + Hono, D1, Queues, Resend, Twilio, React/Vite

- Built and launched the platform (contacts, newsletters, SMS campaigns, reply inbox) with AI-assisted development in Claude Code; 6 client accounts went live about 5 weeks after the first commit (Aug–Sep 2026).
- Added Claude API drafting helpers for subject lines and preview text, plus OpenAI gpt-image-1 image generation.
- Wrote the business case (projected ~89% lower monthly platform cost, no external build spend) and planned a phased migration of 10,000+ client contacts, running the old platform in parallel.
- Designed send-safety and access controls: test mode by default (server-side recipient allowlist), opt-outs re-checked before every send, SMS blocked until A2P 10DLC approval, a fail-closed API and 4-role default-deny authorization.
- Tested inside workerd (the Workers runtime) against isolated D1 databases and fake provider credentials, so no test can send a real message.

AGC HUB — internal content-operations app (React, Firebase, Vercel serverless, GoHighLevel API)

- Added Claude Haiku 4.5 features through serverless API routes: subject-line generation, revision suggestions, a help chat and task-image analysis.
- Brought the content team's work from 5 tools (Drive, ClickUp, Trello, GoHighLevel, Canva) into one app that runs its daily workflow across about 7 client sub-accounts.

Client systems and onboarding

- Built client back-office tools on Cloudflare Workers: a nonprofit funnel-tracker dashboard and a resale startup's admin dashboard (D1, GoHighLevel signup webhook, payout emails, hourly pipeline reconcile).
- Run client onboarding end to end: GoHighLevel sub-accounts, Cloudflare Pages sites, DNS, SPF/DKIM/DMARC sending domains and A2P 10DLC registration; warmed a radio station's sending subdomain to 6,500 emails/day.

- Advise the founder and clients: explain implementations in plain language on onboarding calls and coordinate timelines with the project manager and social media manager.

Virtual Marketing Assistant

Doneverse · Philippines · Sep 2025 – Feb 2026

- As the agency's primary technical implementer, built client accounts on Wix Studio, Kajabi, Mailchimp and HubSpot, including Square payments in Wix Studio checkout and intake flows.
- Shipped Mailchimp and HubSpot onboarding and nurture sequences; owned new-client setup, including domains and email deliverability.

SELECTED PROJECTS

Personal projects, built with AI-assisted development (Claude Code); walkthroughs on request.

n8n + Claude Lead-Generation Pipeline

n8n · Claude API (Haiku 4.5, Sonnet 4.6) · Hunter.io, Snov.io, Apollo.io · Google Sheets · GoHighLevel API

- Designed a 47-node n8n workflow (scheduled 06:00 daily, plus a manual trigger) that pulls 14 RSS feeds across 7 job boards, filters by ideal-customer keywords and dedupes against a Google Sheet.
- Built a 3-provider enrichment waterfall (Hunter.io, then Snov.io, then Apollo.io) with empty-result fallbacks and best-email scoring.
- Claude Haiku 4.5 extracts each job description and Sonnet 4.6 personalizes the opening; drafts queue in Google Sheets for human review (never auto-sent) and sync to GoHighLevel.

yt-engine: AI Short-Video Pipeline

Python · FastAPI · Claude API · OpenAI API (images, TTS) · FFmpeg

- Held cost to about \$1 per video (vs about \$12 for paid generative video; a real 2-part series cost \$0.72) by rendering Ken Burns motion on AI-generated stills.
- Turns a one-line topic into a finished 1080x1920 MP4 with TikTok, Shorts and Reels captions: Claude scripts, OpenAI makes images and voiceover, a custom FFmpeg engine renders. Never auto-uploads.
- Restart-safe jobs with retries that never pay twice for an asset; covered by 406 unit tests and 300 acceptance checks against a fake paid-API stand-in.

EDUCATION

BS Computer Science, Gordon College, Olongapo City · 2021–2025 · Thesis published at IRCITE 2025 (Bulacan State University)

Senior High School, TVL–ICT Track, Columban College Inc., Olongapo City · 2019–2021 · With High Honors
